Appl. No. 09/559, 159 Amdt. Dated October 30, 2003 Reply to Office action of July 31, 2003

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

(currently amended): An information providing apparatus for acquiring contents data representing a high quality still image from a service providing apparatus capable of storing the contents data and of transmitting the contents data in response to a request, and for providing the said acquired contents data in a direct format or in a converted format, said information providing comprising: reproducing \means for reproducing the contents data; image data picture data relaying means for relaying still picture data originated obtained from the contents data reproduced by the reproducing means; moving picture \coding means for producing compressed moving picture data having a high image quality from the still picture image data obtained from said picture data relaying means, said producing being performed by way of a stepwise image quality complementary type coding system corresponding to a coding system\for complementing an image quality in a stepwise manner, and for transmitting the compressed moving picture data to the user terminal to display a still display picture; and control means for determining an area of the still picture data coded into the compressed moving picture data in response to a manipulation made from the user terminal, and capable of for notifying the determined area to the moving picture coding means.

Claim 2 (currently amended): An information providing apparatus as claimed in claim 1, wherein

said control means is capable of producing a control signal used to change the reproducing state of the reproducing means by receiving a manipulation of the user terminal, and is capable of transmitting the control signal to the reproducing means; and wherein the moving picture coding means produces compressed moving picture data from such said still picture data, the content of which is sequentially changed by changing a setting condition of a coding process operation, if necessary.

Claim 3 (currently amended): An information providing apparatus as claimed in claim 1, wherein the moving picture coding means also produces audio data having a designated data format from audio data contained in the contents data, and also produces multiplexed AV data by multiplexing the compressed moving data with the audio data, and transmits the multiplexed AV data to the user terminal.

Claim 4\((currently amended): An information providing apparatus for providing data to a user terminal in response to a request, comprising:

storing means for storing contents data including still picture data;

reproducing means for reproducing the contents data; picture\data relaying means image data for relaying the still picture data originated from the contents data reproduced by the reproducing means;

moving picture coding means for producing compressed moving picture data having a high image quality from the still picture image data by way of a stepwise image quality complementary type coding system corresponding\to a coding system for complementing an image quality in a stepwise manner, and for

Appl. No. 09/559,159 . Amdt. Dated October 30, 2003 Reply to Office action of July 31, 2003

16 transmitting the compressed moving picture data to 17 the a user terminal for displaying a still display image; and 18 19 control means for determining an area of still picture data coded into the compressed moving picture data 20 21 in response to a manipulation made from the user 22 terminal, and capable of for notifying the 23 determined area to the moving picture coding means.

Claim 5 (currently amended): An information providing apparatus as claimed in claim 4, wherein

said control means is capable of is also for producing a control signal used to change the reproducing state of the reproducing means by receiving a manipulation of the user terminal, and is capable of further for transmitting the control signal to the reproducing means; and wherein

the moving picture coding means produces compressed moving picture data from such the still picture data, the content of which is sequentially changed by changing a setting condition of coding process operation, if necessary.

Claim 6 (currently amended): An information providing apparatus as claimed in claim 4, wherein the moving picture coding means also produces audio data having a designated data format from audio data contained in the contents data, and also produces multiplexed AV data by multiplexing the compressed moving data with the audio data, and also transmits the multiplexed AV data to the user terminal.

Claim 7 (new): An information providing system for acquiring content data from a service providing system, wherein the content data represents a high quality still

4 image, said information providing system comprising: 5 moving picture coding means for producing compressed 6 moving picture data from the content data using a 7 stepwise image quality complementary coding system; 8 and transmitting means for transmitting the compressed moving 9 10 picture \ data to a mobile terminal, wherein 11 the mobile terminal displays a still display image 12 representing the high quality still image from the 13 compressed moving picture data.

Claim 8 (new): The system of claim 7, wherein the mobile terminal displays the display image in progressively more detail over some period of time.

Claim 9 (new): The system of claim 7, wherein the mobile terminal is a mobile terminal capable of displaying compressed moving picture images.

Claim 10 (new): The system of claim 9, wherein the mobile terminal is a PDA or a portable telephone.

Claim 11 (new): The system of claim 7, wherein the mobile terminal is a PDA or a portable telephone.

Claim 12 (new): The system of claim 7, further comprising control means for determining an area of a portion of the display image, wherein the portion is chosen by a user manipulation at the mobile terminal, and wherein the control means provides the determined area to the moving picture coding means.

Claim 13 (new): An information providing system for acquiring content data from a service providing system,

wherein the content data represents a high quality still image, said information providing system comprising:

moving picture coding means for producing compressed

moving picture data from the content data using a stepwise image quality complementary coding system;

and

picture data to a mobile terminal capable of displaying compressed moving picture data, wherein the mobile terminal displays a still display image representing the high quality still image from the compressed moving picture data.

Claim 14 (new): The system of claim 13, wherein the mobile terminal is a PDA or a portable telephone.

Claim 15 (new): The system of claim 13, wherein the mobile terminal displays the still display image in progressively more detail over some period of time.

Claim 16 (new): The system of claim 13, further including control means for determining an area of a portion of the display image, wherein the portion is chosen by a user manipulation at the mobile terminal, and wherein the control means provides the determined area to the moving picture coding means, which then produces new compressed moving picture data from the content data using the stepwise image quality complementary coding system, wherein the new compressed moving picture data corresponds to the chosen portion of the display image for displaying the chosen portion on the mobile device in a larger fashion.
